

Wrenching

A Cool Tool

Early in the shop's history, we learned that a 32 gallon Rubbermaid garbage can makes for a great wheel tool. We flip the lid over and it serves several purposes.

The indentation allows the wheel to lay flat. This allows for work to be done without the wheel sitting at an angle and moving around. It makes the job of installing a tube and tire on the rim much easier.

The lid holds tools and loose parts, keeping them close to the work being done.

The lid catches any ball bearings or other parts that might fall out during the disassembly of the hub.

It is also the perfect height.
